

# FAITHFULNESS CAMPAIGN SUPPORTS NEW FACILITIES

## Secondary Campus Improvements Continue using Revised Strategy

The benefits of our secondary campus improvements are already evident as CCS high school students enjoy learning in their new science lab. The renovated space is now home to many chemistry, biology and physics classes previously taught in the basement. Natural light, portable furnishings, and ample storage give this new lab space lots of flexibility to meet the varied needs of the courses that share the room. Students are also enjoying their new lab coats and attempting new experiments that were previously not possible in our classrooms.

As construction completed on the lab renovation, two other major tasks were underway: the successful launch of the Faithfulness Campaign and revisions to the proposed Physical Education complex.

Since its start in November, the Campaign has secured close to \$600k in gifts and pledges towards targeted expansion projects. Through continued promotion and invitation, the whole of the CCS community will be asked to take part in the Campaign to raise \$3 million dollars for new construction. In addition to the double gymnasium space at the secondary campus, donations will also help replace playground equipment at the elementary school.

At the start of the new year, the secondary campus' building advisory committee recommended moving away from a tensioned fabric structure for the new Phys-ed building to more conventional materials. While the previous months of design planning helped clarify many options for the facility, it was determined that the fabric structure was unable to provide all the necessary building features. Its height also proved problematic. With the change in construction options adopted, design has rapidly progressed on the final layout of the new facility.

At the heart of the design challenge now is balancing the specific needs of physical education, athletic competitions, student assemblies, and other CCS gatherings. The committee's goal is to submit a development permit application to the city of Calgary in March. An aggressive schedule has been proposed for the balance of preparations to support a 2022 construction start date.

*The planning committee approved a site plan for the new building, and now turns its attention to finalizing details of its interior layout.*
